Energy performance certificate (EPC)

4, Burn Street Bowburn DURHAM DH6 5AN Energy rating

Valid until 7 February 2027

Certificate number 0638-8013-7232-4993-9950

Property type

Mid-terrace house

Total floor area

74 square metres

Rules on letting this property

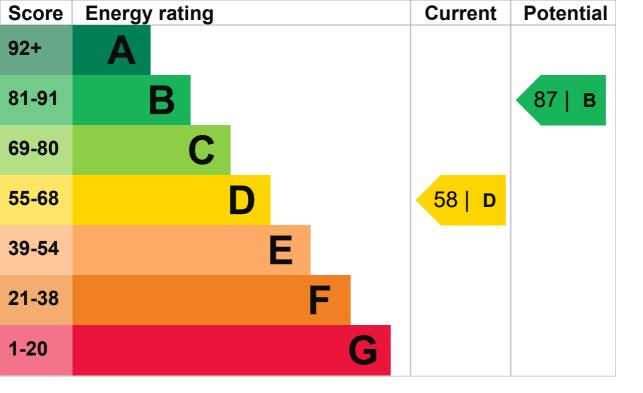

Properties can be rented if they have an energy rating from A to E.

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read <u>guidance for landlords on the</u> regulations and exemptions (https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

Energy efficiency rating for this property

This property's current energy rating is D. It has the potential to be B.

See how to improve this property's energy performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

The average energy rating and score for a property in England and Wales are D (60).

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says 'assumed', it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Solid brick, as built, no insulation (assumed)	Very poor
Roof	Pitched, 100 mm loft insulation	Average
Window	Fully double glazed	Average
Main heating	Boiler and radiators, mains gas	Good
Main heating control	Programmer, no room thermostat	Very poor
Hot water	From main system	Good
Lighting	Low energy lighting in 20% of fixed outlets	Poor
·	<u> </u>	

Feature	Description	Rating
Floor	Suspended, no insulation (assumed)	N/A
Secondary heating	None	N/A
Primary energy use		

The primary energy use for this property per year is 341 kilowatt hours per square metre (kWh/m2).

What is primary energy use?

Environmental impact of this property

One of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

An average household produces

6 tonnes of CO2

This property produces

4.5 tonnes of CO2

This property's potential production

1.4 tonnes of CO2

By making the recommended changes, you could reduce this property's CO2 emissions by 3.1 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

How to improve this property's energy performance Making any of the recommended changes will improve this property's energy efficiency. Potential energy If you make all of the recommended changes, this will improve the property's energy rating and score from D (58) to B (87). rating What is an energy rating? Recommendation 1: Internal or external wall Internal or external wall insulation

insulation

Typical installation cost

£4,000 - £14,000

Typical yearly saving

£206

Potential rating after carrying out recommendation 1

66 I D

Recommendation 2: Floor insulation (suspended floor)

Floor insulation (suspended floor)

Typical installation cost

£800 - £1,200

Typical yearly saving

£35

Potential rating after carrying out recommendations 1 and 2

67 | D

Recommendation 3: Low energy lighting

Low energy lighting

Typical installation cost

£40

Typical yearly saving

£34

Potential rating after carrying out recommendations 1 to	3
	69 C
Recommendation 4: Heating controls (room	thermostat and TRVs)
Heating controls (room thermostat and TRVs)	
Typical installation cost	£350 - £450
Typical yearly saving	£82
Potential rating after carrying out recommendations 1 to	4
	72 C
Recommendation 5: Replace boiler with nev	v condensing boiler
Condensing boiler	
Typical installation cost	£2,200 - £3,000
Typical yearly saving	£46
Potential rating after carrying out recommendations 1 to	5
	74 C
Recommendation 6: Solar water heating	
Solar water heating	
Typical installation cost	£4,000 - £6,000
Typical yearly saving	£33
Potential rating after carrying out recommendations 1 to

Amount of energy saved

444 kWh per year

Potential energy savings by installing insulation

Type of insulation

Loft insulation

Amount of energy saved

Solid wall insulation

3817 kWh per year

You might be able to receive Renewable Heat Incentive payments (https://www.gov.uk/domestic-renewable-heat-incentive). This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments.

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
